

# FUQUA Secure Wireless (Mac OS)

This guide describes connecting to the FUQUA Secure Wireless network on Mac OS. We do not recommend connecting to this network from Android or iOS devices, which should use the DukeBlue network instead.

The FUQUA Secure Wireless network allows Fuqua people to connect wirelessly over an encrypted network to Fuqua specific resources, such as Library Databases, Network Storage, and the Solstice Pods located in all Team Rooms.

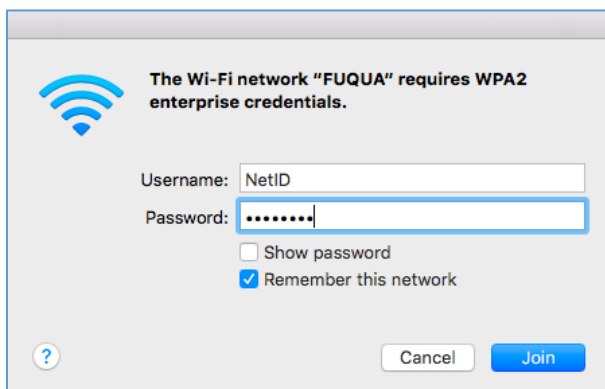

## Connect to FUQUA Secure Wireless (from Mac OS):

In order to connect to the **FUQUA Secure Wireless** network on Mac OS, complete the following steps:

1. On the Mac OS Menu Bar, at the top of the screen, click the Wi-Fi icon. From the menu that opens, select the network labeled **FUQUA**.

2. In the window that pops up, enter **your** NetID and the associated password. Click **Join**.

3. If the connection is successful, you will now see a check mark next to FUQUA in the list of networks.

If you see the check mark, you are connected to the FUQUA Secure Wireless network.

If you receive any error message, or if you are prompted for any further input, the connection has failed and you should come to the TSC Helpdesk in Keller West room 134E for further assistance.
